
Fox Racing Shox Tuning Tips

1. All recommendations are just that and may still require additional changes to suit your personal riding style and/or comfort level
2. Rebound and compression adjustments should always be at the middle setting to start tuning. (example: 22 rebound adjustments will start at 11)
3. When making adjustments always focus on one adjustment at a time. Making several changes at once can make tuning hard and inaccurate.
4. If you ever have questions call or e-mail us and we will help you with any questions you may have.
5. Always make sure when checking or adjusting air pressures that no weight is on the airshocks to ensure proper readings and adjustments
6. Always read your owners manual before use. It contains vital information on use and servicing of your Fox Racing Shox products.
